

Google is so much more than a search engine. There is a myriad of things available that can help you in your classroom today. Each tool listed below can easily be synched with your favorite electronic device.

CALANDER

Keep track of important dates and times such as: staff meetings, after school activities, upcoming professional development, or the MAP testing window.

EMAIL

Send a study reminder to your students. Inform a parent of how well their kid is performing. Ask your colleague about an instructional strategy.

TASKS

Create and organize your daily to-do lists.

BLOGGER

Are you interested in incorporating more writing into your course content? Blogger is free and school internet filter friendly.

READER

Stay up to date with your favorite websites. Each time they post something new, it is automatically sent to you.

SCHOLAR

A good starting point for you and your students to research scholarly literature.

Does Google make us stupid?

"The resources of the internet and search engines will shift cognitive capacities. We won't have to remember as much, but we'll have to think harder and have better critical thinking and analytical skills. Less time devoted to memorization gives people more time to master those new skills."

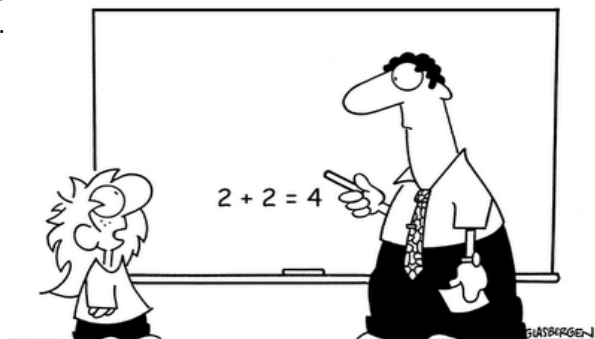

"Literary intelligence is very much under threat. New literacies will be required to function in this world. In fact, the internet might change the very notion of what it means to be smart. Retrieval of good information will be prized. Maybe a race of 'extreme Googlers' will come into being."

"Google itself and other search technologies will get better over time and that will help solve problems created by too-much-information and too-much-distraction."
